PROFESSIONAL SUMMARY

DevOps Engineer with hands-on experience in observability and monitoring — building Grafana dashboards, Loki log aggregation pipelines, and alerting for production systems on AWS. Skilled in containerizing applications with Docker, automating CI/CD with Jenkins, and provisioning infrastructure with Terraform and Ansible. Eager to grow as a DevOps engineer building reliable, observable systems.

PROFESSIONAL EXPERIENCE

DevOps Trainee — Aerin IT Services Private Limited

Mar 2026 – Present

Internship · Chandigarh, India · On-site

- Diagnosed a Grafana Alloy agent consuming 60–70% CPU on a log-heavy Windows instance; built a Python pipeline on an Ubuntu instance to fetch logs from S3 and ship them via Vector to Loki/Grafana, reducing CPU utilization to ~40%.
- Design and maintain Grafana dashboards for real-time monitoring of application and infrastructure health.
- Set up Loki log aggregation pipelines to centralize and analyze logs across services, reducing troubleshooting time.
- Configure Prometheus alerting rules and Grafana notification channels to enable proactive incident detection and faster on-call response.
- Monitor cloud infrastructure on AWS, ensuring system reliability and uptime.

DevOps Intern — StarAgile

Apr 2025 – Sep 2025

Internship · Remote

- Completed hands-on DevOps training covering Linux, Git/GitHub, Jenkins (CI/CD), Docker, Kubernetes, Terraform, Ansible, AWS, Prometheus & Grafana.
- Implemented end-to-end DevOps pipelines in real-world lab environments, gaining practical experience in containerization, infrastructure automation, and cloud deployment workflows.

TECHNICAL SKILLS

Monitoring & Observability: Prometheus, Grafana, Loki (dashboards, alerting, log aggregation, Node Exporter)

CI/CD: Jenkins (pipeline creation, GitHub webhook triggers, automated builds)

Containerization: Docker (build, tag, push to Docker Hub), Kubernetes (deployments, cluster management)

Cloud: AWS (EC2, S3, IAM, infrastructure provisioning)

IaC & Config Mgmt: Terraform, Ansible (server provisioning, automated setup)

OS & Scripting: Linux (Ubuntu, CentOS), Bash, Python

Version Control: Git, GitHub

PROJECTS

DevOps Automation — Healthcare Web Application (CI/CD Pipeline)

2025

- Designed and deployed an end-to-end CI/CD pipeline for a Java-based healthcare app using Jenkins, Maven, Docker, and Kubernetes — reducing release cycle time to under 5 minutes.
- Provisioned cloud infrastructure with Terraform and automated server configuration with Ansible, cutting manual setup effort by ~90%.
- Integrated Prometheus and Grafana for real-time monitoring and alerting across the Kubernetes cluster.

Multi-Instance Monitoring with Prometheus & Grafana

2025

- Built a monitoring solution tracking CPU, memory, and disk usage across multiple AWS EC2 instances; deployed Node Exporter, configured Prometheus scrape jobs, and created custom Grafana dashboards with incident alerting.

Static Website Hosting on AWS S3 using Terraform

2025

- Automated S3 bucket creation, public-access configuration, and deployment with Terraform IaC — fully repeatable deployments in a single pipeline run.

EDUCATION

B.Tech in Computer Science — Chitkara University, Punjab · CGPA: 8.5/10.0

2021 – 2025

CERTIFICATIONS

- StarAgile DevOps Certification — hands-on training in CI/CD, Docker, Kubernetes, Terraform, Ansible, AWS, Prometheus & Grafana.
- Infosys — Introduction to Cloud Computing: IaaS/PaaS/SaaS models; AWS, Azure, and Google Cloud fundamentals.
